

Effective: December 1, 2019

Contemporaneous Review of State Licenses and Apprentice Registration

C.R.S. § 12-23-106, 12-155-108, 12-155-120 and 12-155-124, formerly known as § 15-58-105, 12-58-114.5 and 12-58-117.

Electrical Contractor (EC) and Plumbing Contractor (PC) and their Master Electrician (ME) and Master Plumber (MP) registration and licensure, respectively, are verified as active upon:

1. Initial issuance of registration by SoCoBD
2. Their annual registration renewal
3. An ongoing basis on the issuance of permit(s) by performing random checks of permit records.

No permit will be issued to any licensee when at any time the registration or license is found to be inactive with the State.

SoCoBD utilizes DORA's online system to verify active State registration and licensure.

When the EC or ME, or PC or MP, accordingly, is/are replaced on a project for which either obtained a permit, another active EC or ME, or PC or MP, accordingly, must register the department.

SoCoBD inspectors conduct occasional, random, on site, verification of proper licensure and registration of apprentices as well as verifying compliance with licensee to apprentice ratios. Non-registered or unsupervised apprentices may be asked to leave the jobsite.
